

System Architecture Overview

1. Employee creates goals

Goal sheet with Thrust Area, Title, UoM, Target, Weightage.
Validation: total=100%, min 10% per goal, max 8 goals.

2. Employee submits sheet

State: draft -> submitted. Manager notified via email + Teams card with deep link to /approvals.

3. Manager reviews & approves

Inline edit title/target/weightage. Return for rework (with reason) or Approve & Lock. State -> approved.

4. Quarterly check-ins

Per-quarter: actual value + status (Not started / On track / Completed). Window enforced by cycle dates.

5. Scoring computed

Min: actual/target | Max: target/actual | Timeline: 100% on-time, -5/day late | Zero: 100% if 0, else 0%.

6. Manager comments

Structured comments per goal per quarter. Manager effectiveness tracked (% cells with comments).

7. Reports & analytics

CSV export, completion dashboard, QoQ trends, heatmaps, department breakdowns, thrust area analysis.

8. Escalations fire

Configurable rules: no submission (N days), no approval (N days), missed check-in. Chain: emp -> mgr -> HR.
